

RISK INTELLIGENCE

Gain Visibility into Unknown Threats & Disrupt Attacks Before They Disrupt You

THE PROBLEM

Your brand, your customers, your accounts, your data, and your infrastructure are all at risk in today's cybersecurity ecosystem. You and your partners' sensitive data resides on the deep, dark, and even surface web.

Every day, adversaries are buying and selling intelligence on potential targets: accounts, passwords, documents, spreadsheets, emails, as well as other data and communications.

After that, it's only a matter of time before your intel is leveraged against you in order to infiltrate your organization, exploit it, disrupt it, and exfiltrate even more sensitive data. Risk no longer exists solely within your digital environment but beyond your firewall as well.

How do you gain visibility into the dark web, see exactly what adversaries have on you, and build an effective defense?

THE SOLUTION

Gain sight beyond sight. Risk Intelligence (RiskINT) enhances proactive defense capabilities, giving you the time necessary to prepare an effective defense to better protect your brand, intellectual property, and technology infrastructure.

Gain granular visibility into your leaked accounts, passwords, documents located on the dark web, and phishing domains targeting your enterprise.

Be informed.

Be prepared.

Be protected.

What is RiskINT?

RiskINT is a granularly detailed report covering:

LEAKED DATA FOR SALE

See which of your domains and accounts are for sale on the dark web, including usernames, passwords, and cookies.

LEAKED SENSITIVE DATA

See what sensitive documents have been leaked into the wild, including purchase order forms, product specs, and employee personal information.

LEAKED CREDENTIALS

See credential leaks from third-party services, including usernames, passwords, and hashed passwords.

PHISHING DOMAINS

See risky phishing domains, which have names similar to your branding—triaged by projected severity of impact from our global threat intelligence surveillance platform.

CUSTOMER EXPERIENCE

"CyCraft's customer support provided excellent communication, reports, and response times, leaving us confident and at ease with our security situation."

--Telecommunications, Security Analyst

	RiskINT Lite	RiskINT Pro	RiskINT Premium
Report Content	30% of entries for leaked credentials and domains for sale and on the deep and/or dark web.	100% of entries + proactive phishing domain intelligence	100% of entries + phishing domains + leaked Docs + pricing on leaked accounts + frequency of data being sold
Timing	One Time	One Time	Quarterly

RiskINT Pro: Phishing & BEC

In addition to leveraging valid accounts and leaked documents for initial access, adversaries also phish, leading to business email compromise (BEC). Phishing can come in the form of websites used to spread disinformation and damage your brand's reputation.

43% of successful attacks according to Verizon's 2021 Data Breach Investigations Report were phishing-based.

RiskINT Pro defends against this by providing proactive phishing intelligence. Know what domains to look out for, which ones mimic your domains, and which ones are malicious.

RiskINT Premium: Leaked Documents

Attackers use phishing emails and compromised accounts to break in often with the purpose of obtaining sensitive information. But in many cases, that information is already available on the deep and dark web. RiskINT Premium takes you behind the scenes to show you what is already out there for sale, allowing you to take action and prevent further damage.

> Add-on Services

CA - Why stop with an external assessment? Couple RiskINT with compromise assessments for a complete proactive intelligence report.

CyberTotal - Gain visibility into enriched intelligence into both active and emerging threats with our award-winning global threat intelligence surveillance platform.

ThreatWall - See less dark web exposure by preventing malicious north/south traffic and attacks via global threat intelligence.

MDR - Detect, contain, and eradicate active, emerging, and unknown threats with our award-winning detection and response platform CyCraft AIR.
